

KOYAMA, Tomoyuki

CEO & President of Japan Marine Science, Inc. (JMS), a NYK Group company dealing with maritime consultancy including safety assessment on maritime traffic, supervising new shipbuilding, maintenance of ships, ship operations, Seafarer Training as well as manufacturing Bridge Simulator. JMS has also been taking the lead of Japan's Autonomous Ship Project called Meguri 2040 funded by The Nippon Foundation,

which has successfully demonstrated autonomous ship operations by a container carrier in very congested water in Japan's territorial water. As an experienced master mariner of large container vessel as well as LNG carriers operated by NYK Line, Capt. Koyama has dedicated his career on safety and quality management of 800+ ships operated by NYK and eventually took the position of Chief Technical Officer, Executive Chief of Environmental Management, Chief Safety Officer and Chief Information Officer as Senior Managing Corporate Officer of NYK Line. He also took a seat of directors at IFAN, ITOPE, Japan Navigation Officers' Association and other renowned maritime organizations throughout his carrier.
